
Introduction to Healthcare in the Context of Ageing Societies

Natanon Kittimongkolsuk¹

May 17, 2026

Healthcare is changing at a rapid pace: technology is evolving, and new treatments are being implemented at a breakneck pace on a global scale. However, healthcare still remains limited in many aspects. One critical aspect is health and wellbeing for the elderly population. While technology enabling effective care for vulnerable populations has increased, many needs remain unmet. Among them are access to healthcare, effective nutrition and food technology, availability of tools for medication management and rehabilitation, support for mental health, as well as community-driven care. This booklet aims to explore these topics briefly and provide a foundation to solve issues at large.

NOTE: This text was written as a part of the SCORE Research Camp x Hackathon 2025/26. It is intended as only a brief overview of the topic for hackathon participants. Please perform your own research to support ideas being pitched. Furthermore, please do not limit innovations to the topics discussed within this document.

1 Ageing Societies

2 Thailand's Healthcare System

2.1 Inequity of Healthcare

2.2 Pressing Challenges

3 Social Context

Healthcare is more than just treating symptoms and prescribing medicines for illness. Effective healthcare

demands the involvement of medical practitioners in the community, both at the individual and community scale. Consequently, community relationships serve as a key method for the prevention of disease and to increase the availability of healthcare within communities, especially those in remote areas. Thailand is unique in this context, with a large network of community healthcare practitioners known as “village health volunteers (VHVs)” who serve to protect the health of their communities, monitor vulnerable residents and effectively report community health status to the relevant authorities to promote informed policy decisions that reflect community status at both the community and country scale by narrowing the gap between policymakers and residents of the local area. (One way to define the decentralization of healthcare is the term “community based care”).

Community based care is an effective system, though it has some limitations, including the risk of decreasing equitability of care, to the limited technology available for VHVs. Solutions to these problems are few and far between, but could hold the potential to be highly effective and beneficial for the community at large.

3.1 Expectations of Healthcare

3.2 The Mental Health Stigma

3.3 Healthy Habits

One challenge to providing effective preventative healthcare for the general population is the lack of action regarding healthy eating habits. The typical Thai meal does not cover all nutritional bases, and often exceeds healthy levels for many macronutrients, including calories, carbohydrate, fats, salt and sugar.

Figure 1: Model of the social determinants of health (Dahlgren and Whitehead, 1991) from Mariette-JB, n.d.

The habit of choosing food that is highly flavorful and relatively in excess compared to the nutritional requirements may result in long-term consequences such as the increased risk for NCDs, including renal, cardiovascular and diabetes related complications.

4 Challenges for the Elderly

4.1 Non-communicable Diseases

4.2 Rehabilitation Medicine

4.3 Wholistic Life Quality

4.4 Determinants of Health

The quality of life of a population is determined by a wide range of factors, including social environment, region, social equitability and personal factors among others. Though over 30 years has passed, the Dahlgren and Whitehead remains one of the standard ways of understanding the influences of health even before a visit to the medical practitioner. Many solutions for wellbeing do not start in the hospital, but instead in the community, where interventions are often more effective than treatment of already developed conditions. The prevention of disease, especially non-communicable diseases remains more cost effective than treatment. However, many limitations remain that result in social interventions being overlooked. Solutions in this field are direly needed, and may serve to actively enable the prevention of diseases in the subclinical phase, resulting in healthier communities and longer healthspans for the population.

5 Technological Advances

5.1 The Internet of Things

5.2 “The Cloud”

5.3 Big Data Advances

5.4 Artificial Intelligence
